

SoundBonding application

Bonding technology of bus bars for power module by SoundPower at the first time in the world, was adopted in industrial robots in 1997

Power module for robot control

High power type power module for automobiles

【DSS/Metal SoundBonding system with Dual Support System】 that Ultext developed ahead of world, was used in this application and we accomplished [non-trouble] in this system for 10 years in mass production

After this, the accomplishment led to adoption in mass production of high power type power module for automobiles, used in Hybrid cars such as “LEXUS LS and CENTURY”. Even now, record of [non-trouble] is being updated in production as well
